IGF - UMR5203-U661	Montpellier	Université de Montpellier, IGF sud, 141 rue de la cardonille 34094 Montpellier	Frederic.Bienvenu@igf.cnrs.fr	Frédéric BIENVENU	Cell Cycle Clock Genomics. We aim at deciphering the transcriptional impact of G1-Cyclins in cancer and in the nervous system. Our ultimate goal is to target Cyclin D1 activity to cure cancer and/or prevent from neurodegenerative diseases like Parkinson.	<i>Cyclin E Constrains Cdk5 Activity to Regulate Synaptic Plasticity and Memory Formation.</i> Dev. Cell: In Press, Manuscript Number: DEVELOPMENTAL-CELL-D-11-00560R2. A function for cyclin D1 in DNA repair uncovered by protein interactome analyses in human cancers. Nature. 2011 Jun 8;474(7350):230-4. Transcriptional role of cyclin D1 in development revealed by a genetic-proteomic screen. Nature. 2010 Jan 21;463(7279):374-8. Transcriptional regulation by a DNA-Associated Form of Cyclin D1. Mol Biol Cell. 2005 Apr;16(4):1850-8. Kaposi's sarcoma-associated viral cyclin K overrides cell growth inhibition mediated by oncostatin M through STAT3 inhibition. Blood. 2003 May 15;101(10):4070-7. Functional Interaction of STAT3 Transcription Factor with the Coactivator NcoA/SRC1a. J. Biol. Chem. 2002, 277 (10) : 8004-8011. Direct Repression of STAT3 Transcriptional Activation by Cyclin D1 Through a Cdk4-Independent Mechanism. Duprez, E et al, EMBO J., 22, 5806-5816 (2003)	By combining genome-wide approaches and KO strategies on mouse and human cells, the project will address the mechanism of PcG protein recruitment to chromatin and the role of PcG proteins and its epigenetic marks in HSC function. We will develop assays to address how specific transcription factors intervene in the recruitment or displacement of PcG proteins to chromatin and how this dynamic process influences HSC plasticity.	2	Molecular biologist, Biochemist,	1	Cell biologist,molecular biologist, mouse work expert
U 1068	Marseille	Institut Paoli Calmettes, 27 boulevard Leï Rourte 13273 Marseille cedex 9	jean-paul.borg@inserm.fr	Patrice DUBREUIL	My group has contributed to the identification of mechanisms, transduction pathways and protein effectors initiated by genetic alterations affecting tyrosine kinase receptors. We identified mutations altering receptors in blood-related disorders and have shown that different mutations are associated with qualitative and quantitative differences in cell signalling. Our goals are (i) to study molecular consequences like telomerase expression / activity, genome instability and epigenomic regulation and (ii) to continue to identify the effectors required for these oncopathways and thus new therapeutic targets and therapeutic tools (collaboration with a biotech company).	1. U 1068	Marseille	Institut Paoli Calmettes, 27 boulevard Leï Rouré 13273 Marseille cedex 9	jean-paul.borg@inserm.fr	Vincent GELI	The first goal of our research is to understand how budding and fission yeasts replicate their telomeres and the various cellular responses to telomere erosion with a particular focus on the mechanism by which telomeres are maintained in the absence of telomerase. The second aspect of our research aims to understand the organisation of the Set1 complex and the functional roles of histone 3 lysine 4 methylation, particularly during meiotic replication and double-strand break formation during meiotic recombination.	1. U 1068	Marseille	Institut Paoli Calmettes, 27 boulevard Leï Rouré 13273 Marseille cedex 9	jean-paul.borg@inserm.fr	Pascale ZIMMERMANN	PDZ scaffold proteins and phosphoinositides in cell signaling and oncogenesis. We aim to identify novel molecular mechanisms controlling cancer cell signaling. Our current projects investigate the role of lipids and scaffold proteins in vesicular trafficking and nuclear processes. We combine approaches of biochemistry, cell biology and animal models.	Recent reviews 1. Gallardo R, et al, <i>Chembiochem</i> 2010, 11:456-467. 2. Gallardo R, et al, <i>Chembiochem</i> 2010, 11:456-467. Examples of Primary papers 1.
